Our Cyber Lab

Building your resilience so you can confidently adapt and grow

As more people, products and services become connected, the need to proactively address cybersecurity and privacy risks increases. Businesses need to understand the motivations and tactics of both internal and external adversaries when it comes to anticipating and detecting threats.

1 At PwC, we believe a **scenario-based cyberattack** is the best way for you to see the unseen, and realistically identify your weaknesses not just in technology, but also in your people and processes.

2 Our realistic attack simulations, closely mimic real attacker tactics, techniques and procedures, to **mobilize your entire detection and response** structure and enhance organizational resilience.

3 This helps you **identify the blind spots** in your cyber defence and determine the strengths and weaknesses of your current **detection and response capability** objectively and holistically.

4 Talk to us today, to find out how we can help you build **confidence in your ability to defend, detect and respond** to even the most advanced attack.

Gain valuable insights through:

Penetration Testing

Identify and evaluate security vulnerabilities and understand your risk

Red Teaming

Simulate advanced multi-layered attacks to assess your detection & response capability

Purple Teaming

Emulate attacker behaviour to assess and develop your detection maturity

Incident Detection

Develop the capability to detect attacks bypassing conventional defences

Digital Forensics & Incident Response

Respond to incidents and crises as they arise and perform post-incident analysis
