Navigate the regulatory maze

Delivering Regulatory Compliance services to Cyprus Investment Firms

June 2016
As at June 2016 there were more than 200 investment firms regulated by the Cyprus Securities and Exchange Commission (“CySEC”). For all organisations engaged in activities that come under the supervision of the CySEC, a proactive rather than a reactive approach to regulation saves time and effort at a later stage.

In an ever-changing regulatory environment, investment firms in Cyprus are faced with the challenge of adapting to new regulations which enforce demanding requirements, whilst also managing compliance costs.

PwC Cyprus has a dedicated team of experts specializing in the various regulations governing the sector, assisting many clients, through a broad range of services, to comply with their regulatory obligations.

Markets in Financial Instruments Directive (“MiFID”)

MiFID officially took effect on 1 November 2007. The Directive aims to integrate the European Union’s financial markets and to increase the amount of cross border investment activities. MiFID has implemented several measures, such as pre- and post-trade transparency, disclosure requirements etc.

Giving you the edge

Our local team of regulatory compliance experts can assist you to ensure compliance with the MiFID requirements:

- Undertake a MiFID gap analysis between your current way of operation and the MiFID provisions
- Implement the MiFID requirements
- Answer day-to-day queries in relation to MiFID
- Prepare or update your policies and procedures (e.g. Procedures Manual, Conflicts of Interest Policy, Best Execution Policy, etc.)
- Deliver tailor-made training on many MiFID related subjects

In April 2014, the Markets in Financial Instruments Directive II (“MiFID II”) was adopted by the European Parliament and in June 2014 the MiFID II text was published. MiFID II introduces a range of measures which seek to address issues raised by the financial crisis and builds on the initial MiFID to promote further competition in the European securities market, increase market transparency, enhance investor protection and harmonise the regulatory regimes within different EEA jurisdictions. MiFID II is expected to be applied in 2018.

We can help you:

- Understand the MiFID II proposals
- Undertake a MiFID II gap analysis between your current way of operation and the MiFID II provisions
- Identify interdependencies with other key regulations
- Assess the impact of the rules on your strategic priorities and your operations
- Capture the strategic opportunities and minimise any resultant threats
- Implement enhanced and compliant processes and procedures
- Enhance your business processes, technological systems and infrastructure

We help Cyprus Investment Firms to confidently navigate regulatory changes, addressing their needs for integrated and practical solutions that cover the entire regulatory agenda and beyond.

These changes need to deliver real and significant benefits to their business as a whole. Our dedicated experts recognise that every business is different. We can help you to assess the impact of regulation on your business as well as develop and implement a strategic response that empowers you to take control of the regulatory agenda.

Capital Requirements Directive IV (“CRD IV”) Package

The successful creation of a single rule book for European credit institutions and investment firms resulted in the CRD IV package, which consists of the Capital Requirements Regulation (“CRR”), which is adopted directly by the EU Member States, and the Capital Requirements Directive (“CRD”), which has been transposed into national law by the banking and investment firm regulators across Europe.

The CRD IV rules promote a robust capital and liquidity framework through strict requirements. These pose challenges for credit institutions and investment firms alike and raise questions on the efficient use of capital and liquidity resources. CRD IV also focuses on rules relating to corporate governance, including remuneration, as well as specifications regarding standardised EU regulatory reporting.

Since the introduction of CRD IV, the Basel Committee on Banking Supervision has been working on a new set of requirements, commonly referred to as “Basel IV”, which may have a significant impact on the way that investment firms operate as well as on the size of their Risk Weighted Assets.

Giving you the edge

PwC Cyprus has a dedicated team of experts with local and international experience in the implementation of the CRD IV package, which coupled with our knowledge of the local market and legislation, can help you tackle your technical issues.

We can help you:

- Establish policies and procedures in order to adhere to the CRD IV package
- Quantify your capital ratios, liquidity ratios and leverage according to the CRD IV specifications
- Prepare or review the prudential forms submitted to CySEC
- Become equipped with the necessary skills and knowledge through tailor-made training and workshops
- Prepare or review the Internal Capital Adequacy Assessment Process (“ICAAP”) document and manual
- Prepare or review your Remuneration Policy and/or provide assistance in understanding the EBA requirements
- Design scenarios for stress testing analysis
- Prepare or review the Pillar 3 Disclosures report, in line with the latest requirements
- Address ad-hoc queries relating to the CRD IV provisions
- Optimize your capital consumption and capital allocation framework
- Perform a Basel IV gap analysis based on your business activities
**OECD Common Reporting Standard ("CRS")**

In February 2014, the Organization for Economic Cooperation and Development ("OECD"), released a global standard for the automatic exchange of financial account information, which involves the systematic and periodic transmission of ‘bulk’ taxpayer information. Similar to the provisions of FATCA, the OECD Common Reporting Standard imposes obligations on financial institutions ("FIs") to review and collect information in an effort to identify an account holder’s country of residence and then in turn, to provide certain specified account information to the home country’s tax administration.

Most financial institutions in Cyprus, including Cyprus Investment Firms, are affected by CRS, which brings significant complexity compared to FATCA and which fundamentally changes an FI’s way of doing international business both from a strategic and an operational point of view. Therefore, designing effective due diligence through smart and strategic alignment with AML/KYC processes will be key for a successful CRS project.

**CRS enforcement** is achieved through the imposition of penalties under local legislation as well as compliance activities carried out by the relevant local authorities. Non-compliance may also result in indirect costs from disruption of business relationships and reputational risk.

**Giving you the edge**

Our dedicated team of local CRS specialists is actively supported by CRS subject matter experts from our PwC network to provide you with tailored solutions and support on the technical and operational consequences of CRS.

We can help you:

- Understand the regulatory requirements under CRS and their impact on your business
- Conduct a gap analysis against the CRS requirements and ascertain how work done in relation to FATCA can be leveraged in the context of CRS
- Assess and analyse your current policies and procedures against the key CRS provisions
- Understand and document the CRS requirements across different jurisdictions
- Define the CRS related specification requirements for your individual IT platform
- By providing support in the implementation of the CRS requirements

**Foreign Account Tax Compliance Act ("FATCA")**

The Foreign Account Tax Compliance Act ("FATCA") is a US tax legislation which was enacted as part of the Hiring Incentives to Restore Employment ("HIRE") Act in March 2010 to prevent and detect US tax evasion and improve taxpayer compliance. FATCA is focused on strengthening information reporting and withholding compliance with respect to US persons that invest through, or in, non-US entities, such as Cyprus resident financial institutions.

All investment firms in Cyprus are affected by FATCA, irrespective of whether they have US clients. The penalties of noncompliance are significant and include a 30% withholding tax on any incoming payments relating to US-sourced income. In addition, failure to comply with FATCA may involve legal and reputational issues which could disrupt business relationships with other financial institutions which are FATCA compliant (e.g. counterparties) and lead to loss of business.

**Giving you the edge**

PwC Cyprus has a dedicated team of local experts with international experience in the implementation of FATCA, who work closely with our global network of FATCA specialists to provide you with tailored advice and support on the technical and operational consequences of FATCA.

We can help you:

- Understand FATCA and its impact in the context of your specific business needs
- Conduct a gap analysis against the FATCA requirements
- Strategically refocus your business in the context of the FATCA provisions
- Implement FATCA by adapting your business systems and processes accordingly
- Define the FATCA related specification requirements for your individual IT platform
- By providing support to reinforce your implementation efforts
- By giving guidance during the testing and go-live phase of your FATCA implementation

**Licensing**

If you aim to operate a regulated financial services entity in Cyprus (e.g. an Investment Firm, an Alternative Investment Fund, a UCITS, an Alternative Investment Fund Manager, or a Fiduciary Company), you need to apply to CySEC and obtain the relevant license. In a continuously changing regulatory environment, you need to identify whether a license is needed and to set up your operations in the best possible way, thus saving time and money in the process of obtaining the relevant license.

**Giving you the edge**

At PwC Cyprus we have a dedicated team of experts with significant experience in preparing successful applications to CySEC for obtaining the relevant licenses to offer regulated services.

We can help you:

- Prepare or review the full application package that needs to be submitted to CySEC
- For already licensed investment firms, prepare or review your application to the regulator to set up a branch abroad or offer services cross border
- In the case of licensed investment firms, prepare or review your application to CySEC in order to obtain a license for the provision of additional investment services
- In the case of an Alternative Investment Fund, prepare your application to the regulator to upgrade your license to cover an unlimited number of investors
- Implement the conditions that may be attached to your license in operating as a regulated entity in Cyprus
**European Market Infrastructure Regulation (“EMIR”)**

In 2009, the G20 group of nations agreed on a set of Over the Counter (“OTC”) market reforms designed to reduce systematic risks and to improve market transparency. The European Market Infrastructure Regulation, Regulation (EU) No 648/2012, which came into force on 16 August 2012, brought a number of reforms in the regulation of the global OTC derivatives market. Derivative contracts are traded on exchanges or electronic platforms, cleared through central counterparties (“CCPs”), reported to trade repositories (“TRs”) and are subject to capital or other requirements to reflect the risk of transactions.

More specifically, EMIR introduced clearing, transaction reporting and significant risk management procedures for firms that are subject to EMIR requirements (“firms”), as well as a pan-European regulatory regime for CCPs and TRs. Risk management requirements were phased-in from 15 March 2013, whereas reporting requirements, which have affected a significant number of firms, came into force on 12 February 2014. Clearing obligations for specific asset classes have also come into force and further obligations will be phased-in depending on a firm’s clearing classification category.

**Giving you the edge**

In providing EMIR services to clients we have combined a team of professionals who have wide and in-depth knowledge of the regulatory requirements and extensive experience in the provision of such services. Our team combines international and local experience and brings together the best of both worlds.

We can help you:
- Understand the EMIR obligations and their impact on your business, through an initial impact assessment
- Select a TR(s) and/or a CCP(s) in order to meet reporting and clearing obligations
- Gather business requirements for data interface and migration processes for reporting purposes
- Identify derivative products subject to the clearing obligation
- Assess the application of clearing exemptions for intra-company transactions
- Design, test and document business and operational clearing processes, including improvement of processing efficiency and control
- Adapt the firm’s operational, credit, liquidity and market risk strategy and appetite in light of new collateral arrangements
- Design, build and implement management information systems to monitor different risk types

---

**Anti-Money Laundering (“AML”) and Combating the Financing of Terrorism**

The fight to deter money laundering and terrorist financing has been a high priority of law enforcement agencies and financial regulators around the globe. Laws and regulations become more demanding aiming to provide a stronger framework to address new threats to the international financial system. To successfully follow a risk-based approach, institutions need to perform thorough and regular AML risk assessments and implement adequate controls to mitigate their risks.

Know-Your-Customer (“KYC”) specific procedures, including enhanced due diligence for high risk customers remain a critical requirement. Boards and senior management are increasingly seeking to build integrated, risk-based and efficient AML compliance control programmes. Not only are institutions concerned about avoiding enforcement actions or remedying weaknesses and failures, but many are learning that by treating these initiatives as long-term investments, they can capitalize on potential opportunities.

**Giving you the edge**

At PwC Cyprus, we have professionals that perform money laundering vulnerability assessments, compliance programmes evaluations, and related gap analysis. We can develop a recommended approach for enhancing risk management, and implementing operational solutions so as to ensure adherence with the AML regulatory requirements.

We also work with clients to help them gain greater confidence that their AML compliance controls are specifically designed, efficiently implemented, and sufficiently robust to effectively manage their multitude of risks and regulatory requirements.

We can help you:
- Perform an AML risk assessment in line with regulatory requirements and best practices
- Perform background checks on legal or physical persons to support KYC procedures
- Create effective and sustainable AML compliance control programs
- Improve the quality of AML internal audits
- Design and implement effective customer due diligence processes
- Improve the function and performance of your suspicious activity monitoring systems and processes
- Train senior executives and employees on topics ranging from specific aspects of compliance to regulatory expectations and industry trends
- Prepare or update your policies and procedures (e.g. AML Policy) to ensure compliance with the regulatory requirements
**Internal Audit**

Today more than ever the Boards of Directors are facing ongoing pressure from stakeholders to mitigate risk yet drive business performance. Internal Audit plays a critical role in regulated entities by providing objective assurance that protects the business against risk, supports strategic decision making and improves business performance. However, for an organisation’s internal audit function to provide value, it needs to be equipped with the right tools, technology and know-how. Also an organisation needs to balance the costs and benefits from having the internal audit function in-house or co-sourced/outsourced.

**Giving you the edge**

At PwC Cyprus we help investment firms to improve the value and performance of their Internal Audit function by providing solutions tailored to their needs. Whether you need outsourcing/co-sourcing or Internal Audit start-up assistance, we bring extensive knowledge of Internal Audit, along with sector specialists who know the industry and its technical risk areas. We tailor our solutions to match our clients’ individual business needs and provide insight and assurance over the risks that matter most today and tomorrow.

We can help you:

- In the development of a risk-based Internal Audit methodology, including assessing whether the Internal Audit function is delivering real value to stakeholders
- With Internal Audit resourcing solutions, including full outsourcing or complementing in-house functions with specialist skills or geographical coverage
- In the establishment of your in-house Internal Audit function
- By advising the Audit Committee and developing Audit Committee charters
- By supporting Internal Audit functions with technology solutions (such as Computer Assisted Audit Techniques) to enhance and support their work
- By performing IT Audits including for ERP systems such as SAP, Oracle, Navision

**Recovery Plans**

In June 2014, the European Parliament and Council approved the Bank Recovery and Resolution Directive (“BRRD”), Directive 2014/59/EU. This important piece of legislation sets a common framework across all 28 countries of the European Union on how to deal with troubled financial institutions, including Cyprus investment firms. In March 2016, the BRRD was transposed to national law and published in the Official Gazette of the Republic (“the Law”).

The investment firms impacted by the Law will have to prepare and submit Recovery Plans to CySEC, setting out the actions to be taken to restore their financial position in case of significant deterioration of their financial situation. Following the submission of the Recovery Plans, CySEC will be responsible for their assessment, evaluation and approval.

In summary, the main areas which should be included in a Recovery Plan include strategic analysis, recovery plan indicators, scenarios and stress testing, recovery options as well as a governance and communication plan. It is noted that, as per the Law, CySEC will have the power to apply simplified recovery planning obligations to investment firms that meet certain criteria.

**Giving you the edge**

PwC Cyprus has a dedicated team of local experts with experience in preparing Recovery Plans, who work closely with our global network of BRRD specialists to provide you with tailored advice and support on the technical and operational aspects of BRRD.

We can help you:

- Prepare the Recovery Plan document, leveraging international best practices
- Share recovery planning insights, industry best practices as well as tools and templates
- Leverage our experience with regulators to shape your delivery and communication strategy
- Review your existing documentation and procedures and identify potential gaps / provide recommendations
- Provide advisory support on regulatory standards and guidelines
