

The Modern Approach to Basic Compliance Practices with the General Data Protection Regulation (GDPR)

In an era where data breaches, cyberattacks, and regulatory enforcement are making daily headlines, understanding data protection law is no longer optional — it's essential. This training programme offers a structured modern approach to the legal and regulatory framework of the General Data Protection Regulation (GDPR), with a focus on core processing principles, compliance obligations, and their practical application in the workplace. The seminar covers fundamental concepts, the roles and responsibilities of organisations, lawful bases for processing, data subjects' rights, and the management of personal data breach incidents. It also addresses key security requirements, the conduct of Data Protection Impact Assessments, data transfers outside the European Union, and the maintenance of a Record of Processing Activities — equipping participants with a practical understanding of the core mechanisms for GDPR compliance, based on our hands on experience on local and international organisations.

Who should attend the seminar?

The programme is addressed to:

- Data Protection Officers (DPOs) and members of their teams
- Lawyers and internal legal advisers
- Officers/members of Compliance teams
- Officers/members of IT, Software Development, and Data teams
- Officers/members of Product, Project Management, and Operations teams
- Officers/members of Risk and Information Security teams
- Officers/members of Finance, Marketing, and HR teams
